Correctness”*

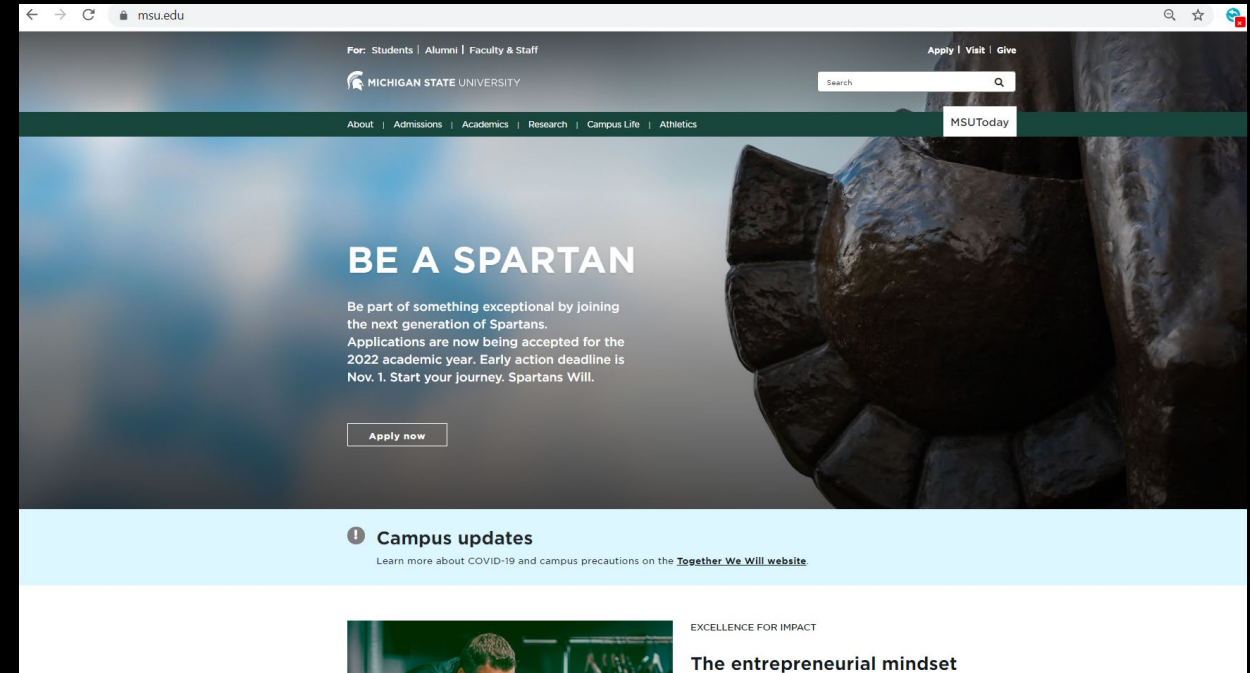

Anatomy of the Web

HTML (Hypertext Markup Language) = Webpage

The Browser

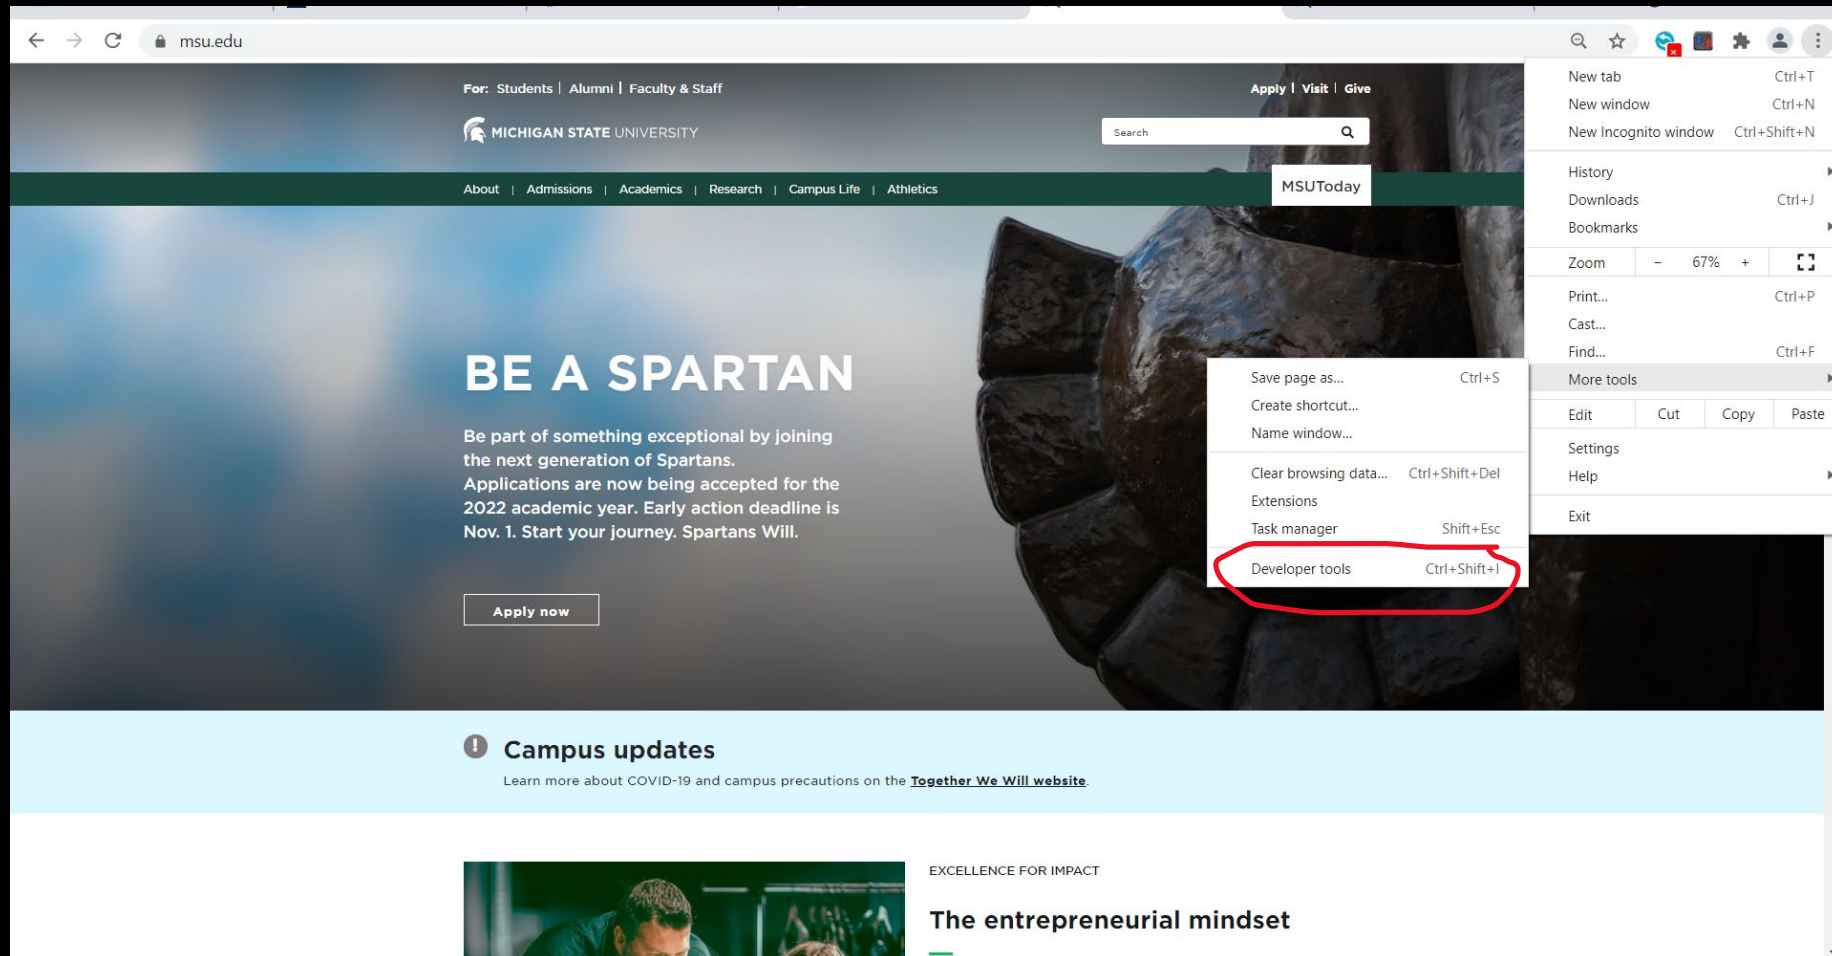

```
288 </div>
289 </div>
290 <div class="col-10 col-lg-4 search-box">
291   <form action="https://search.msu.edu/index.php" method="get" role="search">
292     <input id="q" name="q" type="search" placeholder="Search" aria-label="other global search box">
293     <button type="submit"><i class="fas fa-search" aria-label="Global Search Button"></i></button>
294   </form>
295 </div>
296 </div>
297 </div>
298 </div>
299 </div>
300 </div>
301 </div>
302 </div>
303 </div>
304 <nav aria-label="MSU Main Navigation" role="navigation" class="main-nav edu">
305   <div class="container">
306     <div class="row">
307       <div class="col-12">
308         <ul role="list">
309           <li>
310             <a role="listitem" aria-haspopup="true" aria-expanded="false" href="https://msu.edu/about" target="">About</a>
311             <div class="section">
312               <div class="container">
313                 <div class="row">
314                   <div class="col-3">
315                     <ul>
316                       <li>
317                         <a href="https://msu.edu/about" target="" class="">Overview</a>
318                       </li>
319                       <li>
320                         <a href="https://msu.edu/about/facts" target="" class="">MSU Facts</a>
321                       </li>
322                       <li>
323                         <a href="https://msu.edu/about/history" target="" class="">History</a>
324                       </li>
325                       <li>
326                         <a href="https://msu.edu/visit" target="" class="">Visit</a>
327                       </li>
328                     </ul>
329                   </div>
330                   <div class="col-3">
331                     <ul>
332                       <li>

How to change HTML through the browser?

1. Open “Developer Tools” in Chrome
2. Find the HTML source code under “Element”
2. Locate HTML tags like **h1**, **h2**, **p** etc. and change them manually

JavaScript

JavaScript is a scripting or programming language that allows you to implement complex features on web pages — every time a web page does more than just sit there and display static information for you to look at — displaying timely content updates, interactive maps, animated 2D/3D graphics, scrolling video jukeboxes, etc. — you can bet that JavaScript is probably involved.

-Mozilla Foundation

JavaScript

Program that runs “inside” the browser

HTML

the actual
content of a page

easily control
and alter HTML

Our first Chrome Extension

Source: <https://shiffman.net/a2z/chrome-ext/>

Our first Chrome Extension

1. Using Sublime Text create the following files
 - manifest.json
 - content.js
2. Save them in the same folder

```
{  
  "manifest_version": 2,  
  "name": "My Extension",  
  "version": "0.1",  
  "content_scripts": [  
    {  
      "matches": [  
        "<all_urls>"  
      ],  
      "js": ["content.js"]  
    }  
  ]  
}
```

manifest.json

```
var elts = document.getElementsByTagName('p');  
for (var i = 0; i < elts.length; i++) {  
  elts[i].style['background-color'] = '#F0C';  
}
```

content.js

Our first Chrome Extension

3. Go to “chrome://extensions/” in your Chrome Browser
4. Turn on Developer Mode
5. Click on ‘Load Unpacked’ and navigate to your folder
6. Now all <p> tags should be pink!!!

Try changing colors, text weight of other tags!

Other text alterations

```
document.body.innerHTML = document.body.innerHTML.replace(/Michigan/g, "Mars");
```

Will change all occurrence of 'Michigan' to 'Mars'
